VIRGINIA BILL.

Second reading.
The COMMISSIONER of CROWN LANDS reported that there were many instances of damage to fences (Hon. W. Copley) and it was customary for the Crown to make arrangements to have the rabbits destroyed. The damage to fences was caused by rabbits and the cost of the destruction of the rabbits, the fence, and the cost of labour was about £4,600 for the year. The Government had tried various methods to control the problem, such as fencing and poisoning, but the cost was prohibitive. The Crown would not bear the cost of the damage to fences and the rabbits would continue to be a problem. The Government had made attempts to control the rabbit population, but the rabbits were spreading and the cost of controlling them was too high.

The Hon. J. H. ANGUS thought the Government was spending too much money on the rabbit problem. The rabbits were a menace to the farming community, causing destruction to fences and crops. The Government should consider funding research into the control of the rabbit population and the effective use of available resources.

The Hon. J. W. WARREN was concerned with the spread of rabbit fencing in the area. The Government had been slow to act in controlling the rabbit population. The Government should take a more proactive approach to control the rabbit problem, such as funding research into effective methods of control.

The Hon. J. V. O'GOLIHIN agreed with the Hon. J. H. ANGUS and thought the Government should consider funding research into the control of the rabbit population. The Government should also consider the cost-effectiveness of the current methods of control.

The Hon. A. B. ADDISON supported the Hon. J. W. WARREN's concerns. He thought the Government should consider funding research into effective methods of control and the cost-effectiveness of the current methods of control. The Government should also consider the impact of rabbit damage on the farming community and the need for effective control measures.

The Hon. H. K. SIMMS supported the Hon. A. B. ADDISON and thought the Government should consider funding research into effective methods of control and the cost-effectiveness of the current methods of control. The Government should also consider the impact of rabbit damage on the farming community and the need for effective control measures.

The Hon. A. B. ADDISON agreed with the Hon. H. K. SIMMS and thought the Government should consider funding research into effective methods of control and the cost-effectiveness of the current methods of control. The Government should also consider the impact of rabbit damage on the farming community and the need for effective control measures.
could pay. They had been repeatedly urged to bring down the prices of land, to limit the number of small owners, and to enable small owners to carry on farming successfully. The present Bill was designed to achieve these ends. It would enable small owners to carry on farming successfully. It would be a fair and wise measure to enable small owners to carry on farming successfully. The Commissioners of Crown Lands would have the power to control the prices of land, and to limit the number of small owners. The Bill would not only benefit the small owners, but it would also benefit the Government, as it would enable them to carry on farming successfully. In conclusion, the Member for the constituency expressed his confidence in the success of the Bill, and urged its passage as a means of benefiting both small owners and the Government.
land. The COMMISSIONER of CROWN LANDS (Hon. W. Copley) said the Bill recognized no
difference in such case between the road and the
Crown lands.
The Committee resumed, progress was reported,
and leave was given to sit again on the following
day.
